

## Whirlfit® system

### Whirlfit® system – hydromassage glue-less system of quick connection

Patented Whirlfit® system intended for whirlpool systems is revolutionary innovation in connection of particular components that don't need to be glued and they are connected only by the clips that are built in the particular components. This system of connection is much faster than the classical glued connection. The system can be used and expedited immediately after instalment (you don't need to wait for the glue to get dry). Moreover without glue all the system will be much cleaner. Also you will have less costs for the bath-tubs storage for the testing reasons.

- faster assembling by absence of using solvent cement
- no time delay caused by drying/curing time between rigid-PVC and soft-PVC materials
- jets with universal thread for use with jetfaces from leading suppliers
- total absence of chemicals
- Significant reduction of testperiod after final assemblage
- Additional safety during transport by the mechanical stability of the hose/fitting junction
