

Electronic V3P for pneumatic control

Electronic V3P enables pneumatic control of hydromassage bath-tubs with the connection of capacite water level sensor HLS. The electronic control V3P connects the advantages of pneumatic control switched by pneumatic button with the electronic supervision of the water in the bath-tub, pool, SPA and others, that means e.g. pump, halogen light or heater cannot be switched without water in the bath-tub.

The biggest advantages of the electronic V3P:

- freedom from disturbances
- simplicity
- protection against starting-up without water
