

Improved water level sensor with fast, unmistakable connector

Improved capacitive water level sensor 122041 has the same electronic inner circuit like 122040 but as innovation it adds the push-in connector for fast connection to the main control electronics. Cable grommet is included in the package.

Now it is possible to connect the improved water level sensor with connector to control electronics U7TI (122080) but in the near future all our electronics will be modified to allow connections via connectors instead of screws.

Main advantages:

- Easy installation
- Fast installation
- No possibility of mistaken connection

Compatible control electronics:

- U7TI
- All models available soon
