

Device LAGUNA for water upkeep in pool.

The Laguna device consists of control unit and a pot, where special electrodes are placed. From the electrodes, ions of copper, zinc and silver release into pool water to fight algae and bacteria. The Laguna device assures a troublefree use of the pool even by people with an allergy for chlorine, by children, or people with sensitive skin

Before Laguna is started, the pool water must be treated to pH 6,8 - 7,4, Cl 0,1 - 0,3, and alkalite 80 - 120 ppm.

The copper content inside the pool water at use of the Laguna shall be checked with the attached copper tester; the common copper content = 1mg/litre, max. Cu content = 1,5mg/l

Laguna can be sold in the three above listed completes, containing the control unit, the pot incl. the special electrodes, and the copper tester.

A reliable product, troublefree service
