

Electronic control panel V6STPH

= electronic control panel 2in1!

New electronics V6STPH is combination of classical electronics V4TPH and V5TPH and electronic for StreamClean V2TPN without function of automatic filling. Using this electronic instead of two electronics (V4TPH + V2TPN or V5TPH + V2TPN) will make the wiring of the bath-tub easier and moreover you will save the money of another electronics used.

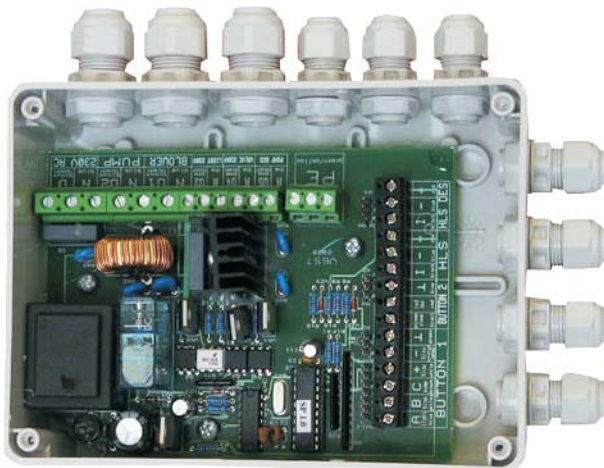

StreamClean cycle has been completed for initial flush of hydromassage system with the pure water from either functional or security reasons (if the StreamClean has been switched on by mistake, there will be enough time to switch it off before the pump of disinfection solution is on).

Except for classical connexion with the distribution frames, there is also possibility to connect the buttons and water level sensors by connectors, which makes the electronics installation much simpler.

Function:

whirlpool, whirlpool pulsation, airpool, airpool pulsation, airpool regulation +/-, light, StreamClean, water level sensor HLS

Save the money for buying only 1 electronic!
