

The system for measuring and displaying up to 4 temperature range of -40 to +105°C

Based on the requirements of our customers, we offer solutions to the problem with the current measurement and digital display of temperature not only in pools and whirlpools, as well as the temperature in the steam cabins and other areas.

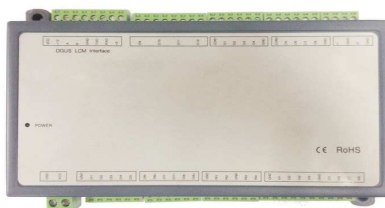

Can be measured one, two, three or four different temperatures, which are clearly displayed on the digital display located eg. by an operator who has an overview of the current status eg. in their wellness, without physical inspection. Temperatures measured platinum temperature sensors PT1000 stored in watertight housings of stainless steel. The sensors can be supplied with electrical conductor desired length. The advantage is the possibility of embodiment of the device according requirements customer, including two options measured temperatures.

Description: - LCM display touch screen, dimensions 129 x 87 mm, 6-15 V DC, diagonal 4,3"
 - Control unit to touch screen display, voltage : 24 V DC, 8 digital inputs, 8 analog voltage measurement, resistance measurement autodetection (PT100/PT1000), 4 relay outputs 10 A (DC 5 A), 8 semiconductor outputs 1 A, 2 current outputs 0 - 20 mA, communication interface RS232 and RS485
 - Sensor PT1000 diameter 6 mm, length 30 mm, temperature range -40/+105°C, length cable 100mm degree of protection IP67

Reliable product, trouble-free service.
